

How It Works

The integrated entry screen allows for customizable data destinations while utilizing the existing functionality of Acumatica.

- * Labor hour records can update Employee Time Cards and create AP Bills for contractors
- * Expense records can create Employee Expenses or AP Bills
- * Equipment records can create Equipment Time Cards or Project Transactions
- * Stock Material creates an Inventory Issue batch
- * Non-Stock Material creates Project Transactions

If Daily Billing is a requirement, options are available to create Project Transactions for all Labour, Equipment and Expense types, while bypassing the weekly timecards.

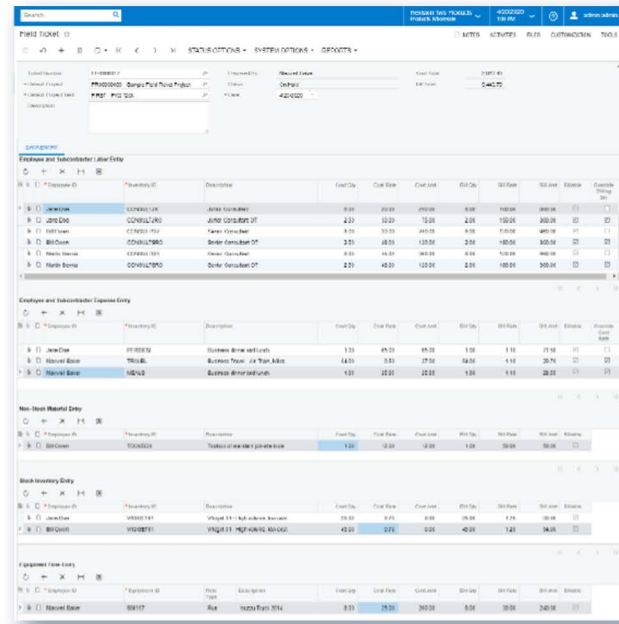

All transactions will go through existing Rate Tables, Allocation and Billing rules to update project records in Acumatica. System security can be enabled to prevent editing of records created from Daily Field Tickets.

Sectors Served:

- * Any Business with Field Technicians:
 - o Service companies
 - o Project companies

System Requirements:

- * Time and Expense Module must be enabled
- * Projects Module must be enabled
- * Compatible with Acumatica 2019 R2 and above

Daily Field Ticketing for Acumatica

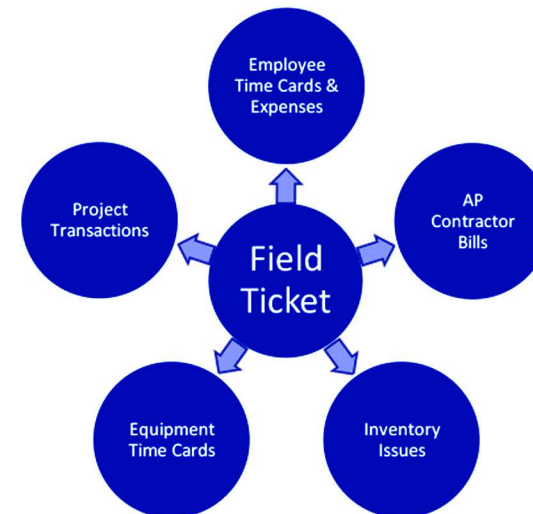

Bring daily field tickets directly into Acumatica, all on one screen! Increase data processing efficiency by removing tedious double entry or data imports from an external system.
